While many people have written about Gould's science, and a few have written about his politics, this is the first book to explore his science and politics as a consistent whole. Political scientist Prindle argues that Gould's concepts and arguments were bona fide contributions to science, but all of them also contained specifically political implications.

The fascinating true story of the controversial development and deployment of the supersonic fighter jet that changed aerial warfare forever. The McDonnell Douglas F/A-18 Hornet was born in 1978, a state-of-the-art supersonic fighter and attack aircraft with a top speed of Mach 1.8, more than one thousand miles per hour. It was versatile, fast, and reliable, and no war machine in the air could match it. The marines adopted it first, followed by the navy, impressed by its incomparable ability to engage in close
aerial combat while at the same time efficiently delivering explosive payloads to designated enemy targets. It became the aircraft of choice for the US Navy’s famous Blue Angels flight demonstration squadron in 1986 and served ably in combat from its first mission—America’s launched air strike against Libya that same year—through 1991’s Operation Desert Storm and well beyond. Yet the Hornet has always been shrouded in controversy, and while still in its planning stages, it sparked an unprecedented political battle that nearly doomed the miraculous machine before it could take flight. Orr Kelly, the acclaimed military author who has notably chronicled the remarkable histories of the US Navy SEALs and other branches of America’s Special Forces, tells the fascinating true story of the F/A-18 Hornet—how it came to be, how it almost wasn’t, and how it forever altered the way our nation’s wars are fought.

If you want peace, understand war. We follow the Reaper during red years of slaughter, wading in blood as he scythes
through the masses, carnage incomparable gouged from human souls. We are not innocents abroad in a world no longer innocent. We see the tattered uniforms waver in whistling winds, feel the cold lifeless blood covering the living metal weapons, hear the grievous wounds oozing words in pleading letters. We keep the echoes of their thoughts, the vision of their chivalry. We have no more dreams. We are Battle-Chasers.

Combat helicopter pilots in the Vietnam War flew each mission facing the possibility of imminent death. Begun as a series of attempted letters to the Department of Veterans Affairs, this compelling memoir of an aircraft commander in the 116th Assault Helicopter Company--"The Hornets"--relates his experience of the war in frank detail. From supporting the 25th Infantry Division's invasion of Cambodia, to flying the lead aircraft in the 101st Airmobile Division's pivotal Operation Lam Son 719 invasion of Laos to cut the Ho Chi Minh Trail at LZ Hope, the author recounts the traumatic events of his service from March 1970 to March 1971.

At first all is well, but mysterious events in the Tiran capital arouse suspicions and anger bubbles just beneath the surface. The F/A-18 Hornet in its various guises was the 'universal soldier' of OIF, with around 250 seeing combat. Flown by various squadrons and groups, the Hornet attacked a range of targets including tanks of the various Iraqi Republican Guard units and government buildings housing elements of the Baath party regime. Apart from its ability to drop precision munitions such as laser-guided bombs, the Hornet was also capable of launching anti-radar missiles and acting as an aerial tanker and reconnaissance platform for other strike types. This book explores the Hornet's versatility which has enhanced its reputation as one of the world's leading strike-fighter aircraft.

A collection of essays follows an author's mid-life search for a middle ground in a world in which he assumes the restless identities of a man, a family member, and an heir, and experiences disillusionment with human behavior and a receding value system. Wars are not fought between good and bad people; they are fought by soldiers. The Axi have invaded Col. Without a fleet, they have managed to land an entire legion on the Valen world and begin sweeping over its deserts in an unstoppable blitzkrieg. Hellick Primus is a squad leader in Driven Company of the 173rd Legion. He has a wife and two children, but today, his ten troopers are his only family. Veterans of two campaigns, the troopers of D Co soon discover that Col is host to the worst violence of their careers. Despite their superior technology and military discipline, Hellick struggles against micromanaging leadership, Col's hostile climate, and a crafty enemy to bring each member of his "family" home alive. Staff Sergeant Ramsey is 1st Platoon's sergeant for Bravo Company, 22nd Infantry Battalion. The Col Defense Guard suffers from a peace time mentality, where soldiers' feelings and
welfare are placed over training. Ramsey's platoon is a wreck of poor soldiers guided by weak leaders and equipped with outdated hardware. Slaughter ensues. The weight of survival falls on the shoulders of a few professionals, who find themselves locked in conflict, while their friends are murdered around them. In war there are no underdogs; there are only survivors and fodder. In war, there are no heroes; there are only the living and the dead. War is not fair. War is hell. Which side will you choose? "Dominic has achieved what all military sci-fi authors aspire to - an expansive, compelling plot with realistic dialogue between soldiers and intense combat scenes. He pulled it off because he's been there and done the real thing. Outstanding." – SSG (ret) Rob Bell

The animal world is full of mysteries. Why do dogs slurp from their drinking bowls while cats lap up water with a delicate flick of the tongue? How does a tiny turtle hatching from Florida circle the entire northern Atlantic before returning to the very beach where it hatched? And how can a Komodo dragon kill a water buffalo with a bite only as strong as a domestic cat's? These puzzles – and many more besides – are all explained by physics. From heat and light to electricity and magnetism, Furry Logic unveils the ways that more than 30 animals exploit physics to eat, drink, mate and dodge death in their daily battle for survival. Along the way, science journalists Matin Durrani and Liz Kalaugher introduce the great physicists whose discoveries helped us understand the animal world, as well as the animal experts of today who are scouring the planet to find and study the animals that seem to push the laws of physics to the limit. Presenting mind-bending physics principles in a simple and engaging way, Furry Logic will appeal both to animal lovers and to those curious to see how physics crops up in the natural world. It's more of a 'howdunit' than a whodunit, though you're unlikely to guess some of the answers.

Hailed once as ‘giants of the Amazon’, Panará people emerged onto a world stage in the early 1970s. What followed is a remarkable story of socio-demographic collapse, loss of territory, and subsequent recovery. Reduced to just 79 survivors in 1976, Panará people have gone on to recover and reclaim a part of their original lands in an extraordinary process of cultural and social revival. Space and Society in Central Brazil is a unique ethnographic account, in which analytical approaches to social organisation are brought into dialogue with Panará social categories and values as told in their own terms. Exploring concepts such as space, material goods, and ideas about enemies, this book examines how social categories transform in time and reveals the ways in which Panará people themselves produce their identities in constant dialogue with the forms of alterity that surround them. Clearly and accessibly written, this book will appeal to students, scholars and anyone interested in the complex lives and histories of indigenous Amazonian societies.

In Annals of Angels: The Genesis, the dawn of creation sparks the epic struggle between Lucifer and all humankind. While in this struggle, one which most humans do not even realize exists, Lucifer pulls no punches. With his lies, tricks, and magic, he gets humans to resent God, get kicked out of the Garden of Eden, murder each other, and plunge the world onto the brink of catastrophe. But not all angels are willing to sit by and watch Lucifer destroy the humans that God so dearly loves. Gabriel and Michael, along with others, heroically stand defiantly between Lucifer and his vindictive vendetta. In this not so classic tale of creation, you will get to see things from the perspective of the angels. In realms unknown to us, angels live, breathe, eat, love, and wage war just as we do. Their lives may often seem very distant from ours, but they often make similar mistakes that eventually drive them away from the almighty God. Will God allow angelic love to overshadow demonic hate, or will he allow Lucifer to win the day and destroy all humanity? The outcome maybe predictable to those who have read the Bible, but in this fiction novel, the twist don't exactly line up with how humanity perceives the genesis of all humankind.

It's the winter of 1883, and five hundred rail workers have halted their push through the Rockies at Holt City, an isolated shantytown in the shadow of the Continental Divide. The men are tired and cold, and patience is as scarce as the rationed food. Then, Deek Penner, a CPR section boss, is brutally murdered at the end of the track. Durrant Wallace, a veteran of the celebrated March West by the North West Mounted Police a decade earlier, is returned to active duty to investigate the murder. Durrant lost his leg in a gun battle with whiskey traders three years earlier, and he struggles with
being a Mountie who cannot ride. When Durrant arrives, Holt City is packed with possible suspects: illegal whiskey smugglers, spies for rival railways, explosive dealers, and a mysterious Member of Parliament who insists on getting his bureaucratic fingers into everything. Durrant is most concerned with the amount of illegal explosive trading-explosives that are meant for railroad blasting, but are instead being sold to those outside the trade. With little in the way of forensic science to draw upon, Durrant must use his cunning and determination to soothe the charged situation before it turns explosive, literally.
